ABOUT ME

I am a software developer passionate about creating business applications and automations that turn manual processes into digital, traceable, and measurable operations, backed by over 3 years of hands-on experience.

I combine functional analysis, software development, data management, and operational knowledge to design solutions aligned with real business goals. I have hands-on experience with C#, .NET, ASP.NET, SQL Server, Power BI, AppSheet, WordPress, Git, and agile methodologies, as well as requirements gathering, process modeling, business validations, documentation, testing, and user support. I am currently pursuing a degree in Computer Systems Engineering, approximately 60% completed, while strengthening my skills in development, infrastructure, and cybersecurity.

CORE COMPETENCIES

Software Development
Robust, maintainable applications.

Automation
Efficient workflows with fewer manual tasks.

Data & BI
Indicators for actionable decisions.

Traceability
Operational visibility and control.

Business Applications
Solutions aligned with business needs.

Cybersecurity
Ongoing training in defensive practices.

Linux & Scripting
Technical automation and support.

Continuous Improvement
Evidence-based optimization.

TECHNICAL STACK

Development
- C#
- .NET
- ASP.NET
- JavaScript
- Python
- AppSheet
- TypeScript
- React
- Next.js
- HTML5
- CSS3
- Tailwind CSS

Data & BI
- SQL
- Power BI
- Excel
- PostgreSQL
- Supabase

Infrastructure
- Git
- Docker
- Linux
- PowerShell
- Bash
- n8n
- VPS

Security & Methods
- Nmap
- Wireshark
- Burp
- Metasploit
- Nessus
- Scrum
- Agile
- RLS
- MFA / 2FA

APPLIEDARTIFICIALINTELLIGENCE

AI-driven development, automation, and decisions

I combine software engineering, agents, and analytics to build verifiable, business-connected, results-oriented solutions.

AI & AGENTIC DEVELOPMENT CAPABILITIES

AI-Assisted Software Development

I use AI to analyze requirements, explore alternatives, accelerate implementation, and strengthen technical reviews.

SDD - Spec-Driven Development

I work from clear specifications, verifiable scenarios, and technical designs before implementation to reduce ambiguity and rework.

TDD - Test-Driven Development

I design tests before solutions, work in short cycles, and safeguard expected behavior as software evolves.

Agentic Programming

I orchestrate specialized agents to explore, implement, review, and validate complex tasks with defined responsibilities and criteria.

Business & Management Agents

I design assistants that retrieve information, summarize context, and support traceable operational and management decisions.

Management Analytics Dashboards

I turn operational data into metrics, trends, and executive views for monitoring, control, and decision-making.

MCP - Model Context Protocol

I connect AI models to tools, data sources, and services through MCPs to extend their capabilities in a controlled manner.

n8n & Intelligent Automation

I automate n8n workflows using events, APIs, validations, and AI agents to reduce manual tasks and response times.

INTELLIGENT DELIVERY WORKFLOW

SDD Specify › **TDD** Validate › **AGENTS** Execute › **MCP** Connect › **n8n** Automate › **BI** Decide

From Operations to Management Decisions

I capture data, automate processes, connect tools, and deliver actionable information through agents and dashboards.

BUSINESS USE CASES

Corporate Assistants

Information retrieval, summaries, and tracking for operational and administrative teams.

Management Intelligence

Indicators, trends, and alerts to help prioritize actions and monitor results.

Operational Automation

Intelligent workflows connecting events, validations, systems, and responsible parties.

Tool Integration

Connected MCPs, APIs, and services to extend agents and applications.

PROFESSIONAL EXPERIENCE

OLO | Forklift Operator and Project Developer

Feb 2025 - Oct 2026

- I analyzed, designed, and developed 4 applications: third-party access to the CEDI distribution center, asset management, invoicing, and returns, replacing manual controls with centralized, traceable digital workflows.
- I gathered requirements from operations and administrative staff through discovery sessions, direct observation, and needs validation; I translated business problems into rules, user stories, use cases, fields, validations, and acceptance criteria.
- I modeled existing and proposed processes, identifying control points, dependencies, responsibilities, exceptions, and opportunities to simplify workflows and reduce unnecessary steps and repetitive tasks.
- I designed information structures for catalogs, movements, statuses, responsible parties, attachments, logs, and histories, strengthening data integrity, access, and traceability across applications.
- I configured smart forms, conditional rules, access controls, automations, alerts, and notifications to reduce errors, incomplete records, duplicates, and follow-up times.
- I built Power BI dashboards and indicators to visualize movements, inventories, returns, incidents, and compliance metrics, supporting operational oversight and data-driven decisions.
- I created technical and functional documentation: user manuals, operating guides, flowcharts, use cases, field matrices, validation rules, test criteria, and training materials.
- I conducted functional and user acceptance tests, documented issues, validated alternative scenarios, and refined interfaces and business rules before each release.
- I provided post-implementation support, analyzed feedback, and continually evolved applications to reflect real operational changes and maintain their long-term usefulness.
- The solutions helped reduce rework, information loss, reliance on manual controls, and response times through standardization, digitization, and better process visibility.
- I developed an HTML website for association members to review and simulate loans and calculate installments and rates based on their membership history, enabling quick estimates and clearer understanding of applicable terms.
- I designed and developed an application to control third-party entry, defining its workflow, validations, and functional logic. The proposal later served as a reference for an internal redesign that retained its core logic and several original criteria.
- I complemented my technical work with direct experience in receiving, storage, picking, dispatch, and material handling, allowing me to understand end users and design technology aligned with operational realities.

Technical & Operational Impact
I combined functional analysis, automation, data, and operational knowledge to build useful, traceable, sustainable applications.

PROFESSIONAL EXPERIENCE

Smaky Digital | Software Developer / IT

Jan 2024 - Dec 2024

- I developed, maintained, and improved business applications with C#, .NET, and ASP.NET, implementing functional modules, transactional forms, validations, business rules, and enhancements to existing solutions.
- I designed, consumed, and tested REST APIs; I built integration logic to exchange information among modules, services, and databases in a structured, maintainable way.
- I modeled, queried, and managed information in SQL Server using schemas, queries, filters, support procedures, and validations designed to preserve data consistency.
- I participated in inventory, information centralization, and administrative automation projects, translating operational needs into clear, implementable, user-focused functionality.
- I produced technical and functional documentation, manuals, specifications, use cases, process flows, and support materials to enable deployment, training, and knowledge continuity.
- I built Power BI dashboards and reports for data analysis, KPI monitoring, and decisions based on operational metrics.
- I developed and maintained websites, landing pages, and manageable WordPress solutions, including page structure, visual changes, forms, content, and technical support.
- I used Git and version control within Scrum and Agile workflows, resolving issues and providing functional support across the complete project lifecycle.

APPLIED SKILLS

Functional Analysis & Design
I interpret needs, define scope, model processes, and translate operational problems into clear, verifiable requirements aligned with business goals.

Development & Integration
I develop applications, modules, REST APIs, and data persistence, focusing on maintainability, separation of responsibilities, and functional consistency.

Quality & Support
I conduct functional tests, validate scenarios, manage issues, and assist users through adoption, support, and evolution of each solution.

Documentation & Knowledge Transfer
I create manuals, diagrams, specifications, matrices, and operating guides to support training, technical continuity, and team autonomy.

Multidisciplinary Scope
I combined backend development, data, APIs, analytics, support, and web solutions in end-to-end business projects.

ADDITIONAL EXPERIENCE

Samtec INC. | Warehouse Assistant / Logistics Operations

2018 - 2023

- I managed physical and digital inventories of materials for production lines, coordinating receiving, verification, storage, location, availability, and dispatch with order, accuracy, and operational continuity.
- I recorded and validated internal movements, transfers, consumption, returns, and location changes, ensuring inventory data reliably reflected physical stock and supported timely replenishment decisions.
- I prepared, picked, and delivered materials according to production priorities, internal requirements, and service windows, helping prevent interruptions, shortages, and delays in operations.
- I applied traceability controls by checking codes, quantities, locations, and associated documentation, identifying discrepancies and reporting issues for correction before they affected subsequent processes.
- I coordinated with production, warehouse, and support teams to fulfill requests, replenishments, and special movements, maintaining clear communication and a strong internal service focus.
- I operated D3-class specialized equipment for moving, loading, and positioning materials, performing pre-use inspections and following safety, responsible load-handling, and risk-prevention practices.
- I contributed to sorting, organizing, and improving storage areas, supporting efficient routes, quick material location, and better visual inventory controls.

Polymer S.A. | Warehouse Assistant

2016 - 2018

- I managed receiving, unloading, verification, sorting, and storage of merchandise, ensuring materials were organized, accessible, and positioned according to stock rotation and dispatch needs.
- I supported stock control through counts, quantity checks, discrepancy identification, and movement updates, maintaining reliable information for operational planning.
- I prepared orders and internal requests, checking item references, quantities, and product condition before delivery, with special attention to accuracy and deadlines.
- I participated in dispatch, material movement, and storage tasks, coordinating priorities and making effective use of available space to maintain a safe, efficient workflow.
- I maintained orderly, clean storage areas, applying organization practices that improved product location, visual control, and prevention of damage or loss.
- I operated D3-class specialized equipment for loading, transferring, and placing merchandise, following safety procedures, pre-operation inspections, and careful handling practices.

FEATURED PROJECTS

Invoice Management

I designed a digital workflow to record, validate, and track invoices, incorporating statuses, responsible parties, and history to improve process control.

Web Loan Simulator for Members

I developed an HTML website where members can simulate loans, calculate installments, and estimate applicable rates based on membership history, simplifying scenario review and comparison.

CEDI Access Control

I built a solution to control third-party entry and exit at the CEDI distribution center, with validations, historical records, and movement traceability.

Returns Management

I implemented a digital workflow to manage return requests, reasons, evidence, responsible parties, and statuses, enabling better tracking and control.

Business Asset Management

I developed an application to register, assign, and manage business assets, responsible parties, movements, maintenance, and history.

.NET Development & Web Solutions

I developed .NET APIs, components, and integration logic, along with responsive WordPress websites and landing pages aligned with corporate goals.

EDUCATION & CERTIFICATIONS

Education

- **Computer Systems Engineering**
  Universidad Latina de Costa Rica · 60% completed · In progress
- **High School Diploma - Adult Education**
  Instituto de Alajuela · Completed
- **English**
  Academia U Inglés · February 2026 - April 2026 · Completed
  Open English · Since April 2026 · In progress

Courses & Certifications

- Data Analysis with Excel
- Power BI
- Networking, Databases & Cybersecurity - Hack4u
- Introduction to Linux
- Introduction to Hacking
- Offensive Python - In progress
- D3 Specialized Equipment Operator
